

Scope Approval Example

Description of Project

A travel agency that would recommend destinations for your summer vacation.

MVP (Minimal Viable Product) Goals

1. Landing page to welcome the user to the site
2. Prompt user for preferences on the vacation with a form
3. Show recommended destinations from a third-party API based on preferences user selected from form

Stretch Goals

1. Allow users to add destinations to a wish list
2. Allow users to compare vacation details
3. Allow users to customize their vacation package

Discovery Phase

Researched Data

- Demonstrate to the instructor that you can get the data that you'd need from the third-party API

Pseudo Code

- A high-level description of how your application will logically work.
- Below is an example of pseudoCode.js file

```
/**
 * Summer Fun Travels
 *
 * A landing page with the app heading, "Summer Fun Travels" and a welcome message,
 * "Always better under the sun.".
 *
 * A button that allows user to start their vacation search, which will navigate
 * them to a form.
 * Listen to the button click event to scroll to the form section.
 *
 * A form that prompts the user for Month and Continent preference (North America,
 * South America, Europe, Africa, Asia, Australia, and Antarctica) with a Select
 * element.
 *
 * Store the user selections in two separate variables.
 *
 * Upon form submission, make an AJAX request to retrieve third-party data based on
 * user preferences to search for vacation packages.
 *
 * Display the list of vacation packages by looping through each result, rendering
 * HTML elements for destination name, resort name, resort details, and highlights of
 * the destination.
 */
```

Wireframe

- Show your beautiful designs (can be boxes drawn on a napkin or an elegant wireframing program - up to you!)
- Make comments for stretch goals

Summer Fun Travels

ALWAYS BETTER UNDER THE SUN.

Take Me There
